PREFACE

This publication was prepared by the Labor Market Information Branch of the Colorado Division of Employment and Training, in cooperation with the Employment and Training Administration of the Department of Labor. It is one of several reports published periodically that provide labor force, demographic, and economic information concerning Colorado's working population.

It is hoped that the information will aid planners, legislators, and administrators in making decisions affecting youth in the Colorado labor force. It is also hoped that the information will contribute to the improvement of employment possibilities for teenagers and young adults.

The narrative analysis in this publication is the responsibility of the Labor Market Information Branch.

Comments and suggestions regarding content and format are invited and may be addressed to:

COLORADO PROFILE

GEOGRAPHIC DESCRIPTION

Colorado is the eighth largest of the fifty states, with an area of 104,247 square miles. The state is divided into three major regions: the Rocky Mountains, the rolling high plains east of the mountains, and the rugged terrain west of the Continental Divide.

One-third of the land lies west of the Rocky Mountains, and two thirds lie to the east.

Mineral resources are available in the western and southwestern portions of the state, with some subsurface resources in the northeastern portion as well. Much of the eastern plains produces irrigated as well as dry cropland products.

The western mountain valleys and basins produce high-quality fruit, as well as hay and grain. Much of the land is also used for pasture.

The San Luis Valley in the south central portion is the major producer of potatoes and truck garden crops.

POPULATION

Colorado has experienced a healthy rapid growth during the period 1970 through 1978. Of the population aged 16 years and over, growth has exceeded 3.0 percent per annum. This compares to approximately 1.0 percent per annum for the United States. The 16-to-19-years-old Colorado population grew at an approximate rate of 2.0 percent per annum, and the 20-to-24-years-old youth population grew at an approximate 4.0 percent per annum rate in Colorado. Growth in the United States was at a much slower pace.

LAND BORDER

The Colorado labor force grew at a rate almost double that of the United States. The 16-to-19-years-old labor force in Colorado grew at an annual rate of more than 9.0 percent, and the 20-to-24-years-old labor force grew at approximately 5.5 percent annually.

FORCE

The Colorado unemployment rates for persons 16 years old and over, the teenagers (16-19), and the young adults (20-24) were significantly lower than the United States averages during the period 1970-1978. However, unemployment did increase in all three categories: from 4.2 to 5.5 percent for the 16-years-old-and-over group, 11.3 to 14.1 percent for the 16-to-19-year-olds, and from 5.8 to 7.4 percent for the

20-to-24-year-olds during the same period. The 16-to-19-year-olds experienced better than two-and-a-half times the unemployment of the total labor force, both nationally and in Colorado. The 20-to-24-year-olds fare slightly better in Colorado than they do nationally.

OCCUPATIONAL INDUSTRY OUTLOOK

The state is divided into thirteen planning regions. These homogeneous geographic areas share common resources and economies.

Regions 10, 11, 12, and 13 are rich in energy-producing minerals, primarily coal and some shale oil.

Regions 1, 6, 7, and 8 are primarily agricultural.

Regions 2, 3, and 4 are the most populated, are located in the Front Range and eastern areas, and together contain four of the state's five Standard Metropolitan Statistical Areas (SMSA's). Manufacturing, trade, and some agriculture are the industries primarily represented in these regions.

Region 5, the high plains area, is primarily agricultural, and, with the exception of Elbert County, is not experiencing high growth rates.

Region 9, in the extreme southwest, boasts energy-related and tourism employment.

During 1978, private nonfarm wage and salary employment grew at a healthy rate of 9.7 percent. During the first quarter of 1979, employment continued to grow at a quarterly average of 9.4 percent when compared to the first quarter of 1978. During the first quarter of 1979, the three highest growth industries were mining, transportation and public utilities, and manufacturing. Trade experienced the lowest rate of growth.

The 1978 annual average occupational distribution of employed persons in Colorado as reported by the Current Population Survey shows the f g: 53.1 percent of males 16 years old and over were ed as white-collar workers, and 66.6 percent of employed les were white-collar workers, of which 36.3 percent were in the clerical occupations. Approximately 14.2 percent of males and 21.6 percent of females were service workers.

The 16-to-19-years-old males were employed primarily as blue-collar and service workers, 46.8 percent and 32.2 percent respectively. The 16-to-19-years-old females were primarily

employed as white-collar workers, primarily in the clerical occupations, and as service workers. Of the employed 20-to-24-years-old males, 28.1 percent were white-collar workers, and 57.1 percent were blue collar workers; 62.6 percent of employed females aged 20 to 24 years were white-collar workers, primarily clerical; and 21.9 percent were service workers. Of males 25 to 64 years old, 50.9 percent were white-collar workers, primarily in the managerial and professional-technical occupations, whereas 70.9 percent of females aged 25 to 64 years were white-collar workers, primarily clerical.

As males mature, more of them are employed as white-collar workers, primarily in the management, professional, and technical occupations, whereas the female's representation in the white-collar group increases primarily in the clerical occupations as she ages. A gradual decline in the number of female service workers is noted as the female gains experience in the labor force.

It is to be noted that the occupations in which teenagers and youth are employed usually offer lower wages and often do not offer career ladder opportunities. Data from the September 1979 Colorado Job Bank indicates the following average wages offered in the major occupational categories:

Occupation	Wage per annum
Professional, technical, managerial	$ 11,919
Clerical	7664
Sales	7611
Services	6843
Farming, fishery, forestry	7342
Processing	8860
Machine trades	9714
Benchwork	7509
Structural	10,005
Miscellaneous	9526

On an industry basis, the three industries paying the lowest weekly wages are Retail Trade; Farming, Fishery, and Forestry; and Services; again, these industries are representative of job availability for youth.

It is projected that by 1983 there will be approximately 1,568,320 jobs in Colorado. Of that, 1,014,220 will be related to vocational-technical education, and 554,100 to non-vocational-technical education.

It is expected that approximately 72,000 job openings per year will be vocational-technical-related. It is further estimated that the job opportunities will fall into the

following U.S. Office of Education occupational categories:

Trade and industrial occupations (service and producing, assembling, testing, and repairing-type jobs)	25,000 per year
Office	22,000 " "
Distributive	18,000 " "
Jobs for technicians (those workers who fall between the skilled craftsman and the professional)	500 " "

At the nine-digit Dictionary of Occupational Titles (D.O.T.) level, the following fifteen occupations are expected to generate the largest number of job openings per year during the period 1978 through 1983:

Occupation	Number of Openings
Waiter/waitress	3800
Sales clerk	3600
Secretary	3500
General office clerk	3000
Hand bookkeeper	2000
Janitor/porter/cleaner	2000
Nurse aide and/or orderly	1800
Typist	1500
Nursing professional	1300
Store manager	1200
Stock clerk	1200
Maid	1100
Food preparation and service	1100
Cosmetologist and/or hair stylist	1000
Restaurant cook	1000

The Colorado State Board for Community Colleges and Occupational Education reported the following enrollment of students at the secondary and post-secondary levels for Fiscal Year 1978 for training in the seven levels defined as vocational-technical areas:

OE Code	Occupation	Secondary	Post-Secondary
01	Agriculture	3532	1045
04	Distributive education	4326	2563
07	Health occupations education	696	5916
09	Home economics	27,947	1766
14	Office occupations	20,396	14,665

OE Code	Occupation	Secondary	Post-Secondary
16	Technical education	1580	8072
17	Trade and industrial occupations	10,109	13,786
	Total	68,586	47,813

The race and sex proportions of those enrolled in these programs were as follows:

	Secondary	Post-Secondary
Indian	1.3	1.1
Black	4.8	6.1
Oriental	0.6	1.3
Hispanic	13.8	9.2
Caucasian	79.5	82.3
Male	38.7	52.0
Female	61.3	48.0

The Colorado Commission for Higher Education has defined the following occupations which require a baccalaureate degree or more, and the Colorado Division of Employment and Training has projected the growth demand for these same occupations:

Occupation	Employment 1978	Employment 1983	Percent Growth	Annual Average Openings Due to Growth
Lawyers	6713	9296	38.48	516
Bank, financial managers	8751	11106	26.91	471
Electricians and apprentices	8380	10647	27.04	453
Sales managers, retail trade	6719	8813	31.15	418
Engineers, electrical	5541	7153	29.09	322
Computer programmers	3919	5114	30.47	238
Buyers, wholesale and retail	2559	3506	37.02	189
Purchasing agents, buyers	3519	4500	27.85	196
Vocational educational counselors	2576	3485	35.28	181
Geologists	3347	4274	27.70	185

Occupation	Employment 1978	Employment 1983	Percent Growth	Annual Average Openings Due to Growth
Computer systems analysts	2123	2907	36.96	156
Engineers, mechanical	2932	3798	2[illegible].35	163
Other managers, administrators	90,348	108,569	20.17	3644
Accountants	14,498	16,974	17.08	495
Personnel, labor relations	5455	6727	23.31	254
Elementary school teachers	18,391	20,416	11.01	405
Engineers, civil	4533	5478	20.82	188
Physicians, M.D., osteopath	4760	5700	19.74	187

The occupations reflecting the greatest number of openings due to growth between 1978 and 1983 will be managers and administrators, at approximately 3600 jobs per annum.

Lawyers, bank/financial managers, electricians and apprentices, and accountants will reflect an annual average growth of approximately 500 openings.

If the trend for vocational-technical training programs continues at the secondary and post-secondary levels, absolute supply will certainly meet demand projections.

The reader must be cautioned that enrollment numbers do not reflect dropouts from programs, incompleters, migrators to other labor markets, and occupational switches after training.

Registered applicants seeking employment through the Colorado Division of Employment and Training reflect another source of labor supply. Although this supply does not reflect the universe, it is viable data, especially for CETA Prime Sponsors, in estimating skill levels of the unemployed and potential participants in their training programs.

The data below summarizes at the major occupational levels the number of applicants by age group in each occupational category of those applicants registered during FY 1979 (October 1, 1978 through September 30, 1979).

Occupation	Male	Female
All occupations		
16-19	21,481	16,682
20-24	39,644	27,981
25 and over	72,262	55,393
Professional, technical, and managerial		
16-19	267	273
20-24	3110	3047
25 and over	14,705	9912

N.E.C.	84	10.4	145	9.1	1090	8.6

The occupational skill levels of registered applicants and insured unemployed claimants, though limited sources of occupational supply, can be useful in determining the occupations in which youth predominate. Occupations of registered Job Service applicants 16 to 19 years of age are predominately clerical, services, and structural. The claimants' preponderance for the under-22-years-old group is in clerical, laboring, and structural.

The 20-to-24-years-old registered applicants were primarily represented in the clerical, structural, and service occupations. This same age group of claimants was predominantly represented in the structural, laboring, and clerical skills. The 25-years-old-and-over group of registered applicants predominated in the professional-technical-managerial, clerical, and service occupations. Occupation of last employment of claimants was predominantly professional-technical-managerial, clerical, and structural.

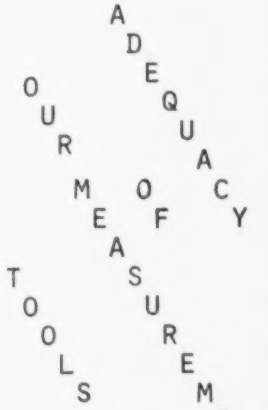
YOUTH UNEMPLOYMENT - WHAT ARE THE ISSUES?

There is general public recognition that youth unemployment is a cogent national issue. Beyond this recognition, the viewpoints concerning the causes and cures of youth unemployment are as varied as the numbers of persons involved in the problems of youth unemployment.

Some fundamental issues to be considered in any analysis of youth unemployment should include the following:



The concepts of "labor force", "employment", and "unemployment" were largely derived from the Depression experience. At that time, the primary issue was joblessness among adult breadwinners. When applying the same rationale to persons with marginal and fluctuating attachments to the world of work, such as teenagers and young adults, the results become cloudy and not truly representative of the actual unemployment of youth.

The national Current Population Survey (CPS) program, which estimates monthly labor force data, also conducts a Gross Flow tabulation each month which provides estimates of the number of people who move between unemployment, employment, and nonparticipation in the labor force from one month to another, interviewing the same people for two consecutive months. This Gross Flow series substantiates the theory that the chronically high unemployment rate of teenagers is directly linked to their flow into and out of the labor market several times a year. In 1976, the CPS observations showed that each month approximately half of all unemployed teenagers either found jobs or left the labor force, only to be replaced by a roughly equal number of teenagers who previously were outside the labor force or were employed. These inter-labor market flows are dominated by transitions between work and school. Also in 1976, it was found that of the persons with labor force experience, three-fifths of 16-to-17-year-olds, two-fifths of 18-to-19-year-olds, and a fifth of 20-to-24-year-olds were in the labor force less than six months, compared with only a tenth of the 25-years-old-and-over labor force participants.

Given these statistics, two important questions must be asked. Is the teenage unemployment as high as the estimating procedure indicates, since many youths are counted each time

they enter and/or reenter the labor force, whereas inbetweentimes they really did not look for or want employment? Secondly, if the vast majority of youth want only part-year and/or part-time employment, shouldn't the measurement of their employment status employ different methods that would reflect more precisely those numbers of youth actually seeking employment at a point in time?

DELINQUENCY AND CRIME

Some fact and much myth attribute delinquency and crime to youth unemployment. Although there is some correlation, unemployment is not always the prime cause of delinquency and crime. Research has found that cities with the greatest disparity between the proportion of population with annual incomes over $10,000 and under $3000 have higher crime rates than those areas with greater equality of income, i.e., suburbs.

The expanded use of psychoactive drugs in the 1960's and 1970's by teenagers and youth has created an underground employment of youthful pushers who have no desire to enter the labor force and find employment at minimum wages. However, due to the illegal nature of their activities, when these youth become a part of the monthly survey of labor force status, they appear as unemployed seekers of jobs.

This group of young people is also primarily centered in large cities, where drug trafficking and prostitution are most prevalent.

AVAILABILITY OF JOBS FOR YOUTH

Traditionally, the explanation for high youth unemployment has been one of lack of jobs in the economy. Almost all federally-funded employment and training programs, from the Manpower Development and Training Act (MDTA) in 1962 to the current Comprehensive Employment and Training Act (CETA) and the Youth Employment and Demonstration Projects Act (YEDPA) programs, are focused on job creation. However, many specialists and economists are acknowledging the fact that the two major causes of this chronically high youth unemployment are the slow absorption of new entrants into the labor market and youth's low labor market attachment. In 1978, approximately 42% of unemployed teenagers were new entrants into the labor force. These new jobseekers spend more time in job search before obtaining their first employment than do those who have been or are reentrants into the labor force.

The second cause, low job attachment, is based on the fact that the major activity of approximately 40% of the labor

force aged 16 to 21 years are attending school.

The view that there are no jobs available to teenagers and youth is not totally correct. Entry-level jobs that offer valuable training or advancement opportunity are not too readily available; however, minimum wage, secondary-labor-market employment such as waitering/waitressing, busing, laboring, service work, and retail clerking and cashiering are readily available to youth seeking jobs. Additionally, these low-paying, unskilled jobs often meet the needs of many teenagers and youth seeking temporary and/or part-time employment.

Keeping in mind the above considerations relative to youth unemployment, planners and legislators are put in the position of implementing programs that will meet the economic needs of youth and still result in motivating them to become independent adults.

YOUTH PROGRAMS

The time has arrived when programs to deal with youth unemployment must become cohort-specific. This means that the ghetto minority youth in the highly industrialized cities need programs that are different from those for youth in the small midwestern rural areas.

One of the objectives of the passage of CETA in 1973 was to place the responsibility for program development at the local level, so that specific cohorts could be served relative to the needs at the local level.

The amended Youth Employment and Demonstration Projects Act of 1977 in some ways allows a variety of program mix and has a more flexible evaluation criterion based on type of program and area.

For many youths, neither the experience gained in school nor the intermittent exposure to work at the kinds of jobs usually open to teenagers is adequate preparation for an adult career. The double bind of not being able to get a decent job with career possibilities because of lack of experience and not being able to get the experience because employers won't hire them often confronts youths seeking employment.

Some basic improvements needed to help smooth the transition period from school to work should include the following:

- Students should not be graduated unless they have at least mastered the basic work to render them functionally literate. Both secondary schools and colleges need to pay closer attention in the curricula planning to changes in job technology and availability.

- Job information counseling and placement activity through the schools, the CETA programs, the U.S. Employment Service, and the private sector must become more effective and efficient.

Part A of CETA Title III directs the Secretary of Labor to provide special services to meet the employment-related needs of population groups that have particular disadvantages in the labor market. Teenagers and youth fit that criterion. The Office of Youth Programs was created by the Employment and Training Administration (ETA) in 1978 to administer programs authorized by the Youth Employment and Demonstration Project Act (YEDPA), the Job Corps and the Summer Program for Economically Disadvantaged Youth.

The YEDPA of 1977, which amended CETA, created four major demonstration programs, each representing a different way of addressing youth employment problems, and authorized a variety of experimental and demonstration projects to test the kinds of services that work best for different youth groups.

Youth Incentive Entitlement Pilot Projects (YIEPP) are designed to test the effect of guaranteed jobs on the high school return, retention, and completion rates of economically disadvantaged youth. Young people 16 to 19 years old in selected geographic areas are guaranteed year-round jobs if they agree to attend high school or work toward a high school equivalency degree. The jobs offer an average of 20 hours of work per week during the school year and up to 40 hours per week in the summer. About 30,000 jobs are being provided for an 18-month period in 17 CETA Prime Sponsor locations, with $115 million in budget authority.

Youth Community Conservation and Improvement Projects (YCCIP) develop the vocational potential of jobless youth by providing them with well-supervised work of tangible community benefit. The program is for unemployed 16-to-19-year-olds, with preference given to out-of-school youth with the most severe difficulty in finding employment. In fiscal 1978, approximately 20,000 jobs were created in community-planned projects lasting up to one year. Supervision was provided by skilled workers, including many union journeymen. Of the $115 million in budget authority available in fiscal 1978, $86.25 million, or 75 percent, was allocated to CETA Prime Sponsors for basic program operations, two percent was for migrant and seasonal farmworker youth, two percent for Indian Programs, and 21 percent for the discretionary use of the Secretary of Labor.

Youth Employment and Training Programs (YETP) seek to enhance the job prospects and career preparation of low-income youth aged 16 through 21 who have the most severe problems in

entering the labor force. Eligible youth are from families whose incomes do not exceed 85 percent of the Bureau of Labor Statistics' lower living standard level. Youth from families with lower incomes receive preference for enrollment. Of the $537 million in budget authority available for YETP in fiscal 1978, 75 percent, or $403 million, was made available by formula to CETA Prime Sponsors; of that amount, about $88.5 million, or 22 percent, was earmarked for in-school projects. A large number of discretionary projects were also supported by YETP funds.

The Young Adult Conservation Corps (YACC), which became Title VIII of CETA, is patterned after the New Deal's Civilian Conservation Corps. Its aim is to give young people experience in particular occupational skills through their work on conservation and other projects carried out at federal and non-federal sites. Young people aged 16 through 23 who are unemployed and out of school are eligible for the program. Preference is given to youth from high unemployment areas. Out of total budget authority of $233 million available in fiscal 1978, 30 percent was allocated in grants to states for state conservation efforts that included preservation, management, and improvement of vegetation and wildlife; development, rehabilitation, and maintenance of recreational facilities; and natural disaster damage control and cleanup activities. YACC is operated by the Departments of Agriculture and the Interior under the terms of an interagency agreement with the Department of Labor.

Enrollments in the four YEDPA programs, as of September 30, 1978, were as follows:

Program	Enrollment
YETP	125,900
YCCIP	13,000
YIEPP	29,700
YACC	27,000

YEDPA authorizes discretionary projects whose purposes are: 1) to explore the relative effectiveness of different approaches to assisting economically disadvantaged and other youth to complete high school in order to become employed; 2) to enable these youth to achieve job stability and advancement once they find jobs; 3) to analyze and evaluate in a rigorous manner the results of the programs being funded; and 4) to develop policy recommendations concerning the youth employment problem.

Under the discretionary portion of YEDPA, the Department of Labor funded over 60 major demonstration projects or re-

search studies, involving more than 300 separate subcontractors or project sites, in fiscal 1978. Over 22 different programs were undertaken with other federal agencies. Some of these efforts are as follows:

Ventures in Community Improvement. This demonstration at nine sites is aimed at testing the feasibility of using a nonprofit intermediary corporation (the Corporation for Public/Private Ventures) as a mechanism for replicating a model community improvement program. It also seeks to measure the value of the work done in a project and its impact on both the community and the participants. Sites were selected and projects began operating in the fall of 1978.

Community Improvement Demonstration. This demonstration was established through an interagency agreement with the Community Development Corporation ot the Department of Housing and Urban Development. The projects, which began operating at ten sites in the spring of 1978, are measuring the effectiveness of community development corporations as delivery agents, particularly their success in obtaining funds from other sources, and the efficacy of the direct federal-local approach to establishing programs for aiding youth and their communities.

Rural Housing Improvement Project. In addition to funding a housing demonstration that is basically for urban areas, the Employment and Training Administration is using YCCIP funds to support the wages of youth helping to rehabilitate and construct rural housing. The project operates under an agreement with the Farmers Home Administration (FmHA) of the Department of Agriculture and the Community Services Administration (CSA).

Under the agreement, funds are transferred to CSA to support rehabilitation and construction projects operated through rural cooperatives, community action agencies, and community development corporations. Youth restore homes of the elderly and rehabilitate some homes repossessed under the FmHA 113 program for eventual resale at market value.

Railroad-related Community Improvement Demonstration. This demonstration in three states is testing the concept of direct federal-state partnerships to improve railroads. Two of the three projects have also tried to link their jobs components to correctional reform and efforts to assist ex-offenders. This project is operated jointly with the Department of Transportation.

Youth Service Demonstration. This project in Syracuse, N.Y. was established through an interagency agreement with ACTION. Stipends are paid to all youth volunteers from families at all income levels who engage in a variety of community service activities. This project began operating in the spring of 1978.

Educational Entitlement Voucher Demonstration Project. This project tests the feasibility and value of applying the GI Bill approach to higher education and training for youth participating in selected employment and training programs. Planned during fiscal 1978, the demonstration began in fiscal 1979.

Exemplary In-school Demonstration Project. This demonstration provides grants to educational and other local agencies through CETA Prime Sponsors for exemplary projects that supply such services as career information and academic credit for work experience. The aim is to promote cooperation between the local educational and employment and training systems. This project was developed with Youthwork, Inc., a specially-created nonprofit corporation comprised of educators and experts in training and employment. The 48 grantees were selected in late spring 1978 with projects beginning in the 1978-79 school year.

Career-oriented Alternative Education Demonstration Project. This demonstration seeks to replicate the successful Career Intern Program initiated by Opportunities Industrialization Centers (OIC's) of America, Inc. The five projects for dropouts and potential dropouts are operated by OIC's under a contract with the National Institute of Education in the Department of Health, Education, and Welfare.

Private Sector Initiatives for Youth. This demonstration carefully assesses alternative techniques for involving the private sector in the employment and training of youth. The subject areas include job restructuring, cost reduction, youth business efforts, direct business involvement in placement efforts, preemployment services, and reduction of barriers to employment. The varied projects are being coordinated by the Corporation for Public/Private Ventures.

Youth Entrepreneurship Project. A Corporation for Youth Enterprises (CYE) has been created with joint participation of the Department of Commerce's Office of Minority Business Enterprise and the Community Services Administration. CYE supports businesses run by youth, with YETP funds covering wages of the young workers during the startup period. The design stages extended through fiscal 1978, with program operations beginning in fiscal 1979.

Work-Education Councils. The Department of Labor continued support of education and work councils established in 1976 in 33 local areas. The Office of Youth Programs worked with the National Institute of Education to develop a major study of the effectiveness of these councils in improving school-to-work transition.

School-to-work Transition Demonstration Project. A set of alternative service deliverers, mainly community-based organizations. are providing transition services to high-school juniors and seniors. The results will be carefully assessed to determine the comparative effectiveness of these deliverers and the impact of such services on economically disadvantaged youth. The grants were signed in 1978, and all projects were operating in the 1978-79 school year.

Longitudinal Survey of Youth Transition from School to Work. This five-year study is exploring the work-related life experiences of young men and women aged 14 to 21. The survey, an extension of the National Longitudinal Surveys, is being directed by the Ohio State Research Center for Human Resource Research. It has three major purposes: to evaluate current ETA programs for youth; to continue to explore the factors responsible for differences in educational and labor market experiences; and to compare the experiences of the respondents with those of groups of the same ages studied in the 1960's. The first survey was conducted in 1979 with annual followups planned.

Use of Occupational Information in Aiding Youth. Funds were transferred to the National Occupational Information Coordinating Committee (NOICC) to improve the content and delivery of occupational information for youth. NOICC has arranged for a national survey of occupational information at the secondary school level, a structured test of the effectiveness of different types of information at the secondary school level, and a test of the effect of intensive exposure to occupational information on disadvantaged youth.

This effort includes a conference on youth unemployment statistics and their meaning, a coordinated set of studies on black youth unemployment, and an analysis of the impact of government programs on measured rates of youth employment and unemployment. It also involves assessments of youth program data systems and performance measures, a study of the value of work output, a study of the quality of jobs, and a conference on the problems of young women. Additionally, a range of technical assistance contracts was developed to identify model programs.

Summer Program for Economically Disadvantaged Youth. The 1978 Summer Program for Economically Disadvantaged Youth (SPEDY) served about 1,009,300 persons. It attempted to provide better work experience than was available in previous summer programs and to increase the opportunities for vocational exploration in the private sector. In addition, the program included several special efforts, such as the following:

1. An assessment of SPEDY jobs as to supervision, attendance, worksite discipline, hours of work, work activities, and potential for developing skills was made. The overall mix of jobs and wages was reviewed, and exemplary summer projects were identified.

2. The integration of SPEDY with YEDPA and other employment and training efforts for youths was analyzed through case studies of YETP and YCCIP.

3. National office review teams visited ten Prime Sponsor areas in the spring and midsummer of 1978 to assess planning and implementation of SPEDY projects.

4. A demonstration effect employed handicapped persons and offenders in the Vocational Exploration Program (VEP), and another project helped youth enter nontraditional jobs. The results of a process evaluation to assess the special problems related to these activities are available as of fiscal 1979.

5. The characteristics of participants in regular SPEDY, national and local VEP's, and entrants into nontraditional jobs were assessed, together with the effects of program activities on enrollees in a sample of Prime Sponsor areas. The impact measures focused on maturity and job readiness, occupational awareness, and attitude changes in participants. The results are available as of fiscal 1979.

Job Corps. Job Corps is a national program authorized by Title IV of CETA. The program is designed to help the most disadvantaged 16-to-21-years-old youth become more responsible, employable, and productive citizens. Participants are youth who are out of work and out of school and in need of additional education, vocational skills training, counseling, and other supportive services. Originally authorized as part of the Economic Opportunity Act of 1964 and delegated to the Department of Labor in 1969, Job Corps is now in its fifteenth year of operation.

Program Expansion. Under a plan initiated in fiscal 1977, Job Corps enrollment capacity was to be doubled to a level of 44,000 in fiscal 1979 as one step in alleviating the nation's youth unemployment problem. However, because of site acquisition problems, construction and rehabilitation delays, and difficulties in finding and training center staff, the planned date for achieving this goal has been postponed until the end of March 1980. Since the avera e length of stay in Job Corpos is about six months, the fully-expanded program will serve about 88,000 youth each year.

As part of the expansion effort in fiscal 1978, the Job Corps opened five new centers in the states of Georgia, Pennsylvania, Kentucky, New York, and Virginia, thereby increasing enrollee capacity to 2367. In addition, 36 existing centers expanded their capacity by 1479, and 1654 slots were made available in the Advance Career Training Program. Furthermore, Job Corps acquired 28 new sites, which were to have provided almost 10,000 more enrollee training positions.

Enrollee Characteristics and Placements. In fiscal 1978, 48,880 new enrollees entered the Job Corps. Their characteristics were comparable to those of youth entering the program the year before: 56 percent were black, ten percent were of Hispanic origin, 86 percent had less than a high school education, and 68 percent were from families on public assistance or earning less than $5000 per year. The proportion of women was 29 percent.

Job Corps had an overall placement rate of 93 percent in fiscal 1978, identical to the rate for the previous year. Of 30,072 enrollees available for placement, 20,465 obtained jobs, 6083 returned to school or enrolled in training programs, and 1372 entered the Armed Forces.

During FY 1979 (October 1, 1978 through September 30, 1979), 24,453 persons participated in CETA programs in Colorado. Of that number, approximately 31 percent were under 19 years of age; nine percent were 20 through 21 years old. The three major CETA youth programs in Colorado were YCCIP, YETP, and Title II. Of the 14,200 participants in Title II in Colorado, approximately 31 percent were under 22 years of age.

12.7 percent of those under 19 terminated the program by entering employment, whereas 21.7 percent of those 20-21 years old entered employment, and approximately the same ratio of those over 22 years of age entered employment.

In Colorado, 729 applicants aged 16 through 19 and 20 through 24 years were enrolled in Job Corps training programs.

National data for FY 1978 (as reported in the Employment and Training Report of the President, 1979) indicates that approximately 39.6 percent of total terminations for all ages resulted in either direct placements, indirect placements, or self placements. It would appear that the Colorado CETA Prime Sponsors should attempt to evaluate and analyze their programs in an effort to increase the proportion of those entering employment to total participants.

ANALYSIS OF SERVICES TO CDET REGISTERED APPLICANTS

The State of Colorado enjoyed a healthy, growing economy during FY 1979. This was noted by the steady growth in employment and the stable rate of unemployment at about 3.3 percent of the labor force.

The number of total applicants available for employment services decreased by approximately seven percent and by about two percent for the under-20-year-olds. However, placement of total applicants and of the under-20-year-olds decreased over FY 1978 placements and increased slightly for the 20-to-24-year-olds. Permanent placements for the under-20-years-old applicants improved by approximately one-third in FY 1979.

Job Development contacts increased for total applicants and the 20-to-24-year-olds, but placements as a result of Job Development decreased from FY 1978.

Applicants provided no services decreased between 18 and 22 percent for the three groups. However, applicants provided positive terminal service decreased by approximately five percent.

This review of services to youth applicants in fiscal years 1978 and 1979 reflects some decreases in services such as placement as a result of Job Development, enrollments in training, and termination with positive service. Other services showed improvement during 1979 over 1978, such as counseling and placement after counseling, and a decrease of termination with no service.

Evaluating the services rendered to applicants is of importance to management and to planners, as well as to users of the Job Service agencies. The formula for developing the employment service budget used by the Department of Labor utilizes the quantity and quality of services to all applicants as well as to special target groups. The guidelines promulgated by the Department of Labor for employment service budgetary plans include priority and special services to such groups as veterans, claimants, women, disadvantaged persons, minorities, and youth. Equity of services is one of the best measures used to determine services to special groups as compared to total applicants.

During FY 1979, 105,788 applicants or 45 percent were youth 24 years old or younger, 16 percent were under 19, and 29 percent were 20 to 24 years old.

The following data indicates the ratio of services to teenagers and youth relative to their proportions of total applicants:

	Total Applicants	Under 19	20-24
Total applicants available	233,443	38,163	67,625
Percent	100.0	16.3	29.0
New applicants or renewals	216,682	36,618	63,935
Percent	100.0	16.9	29.5
Total placements	64,088	12,717	20,670
Percent	100.0	19.8	32.3
Permanent placements	44,558	7791	14,721
Percent	100.0	17.5	33.0
Placed at under $2.99	17,019	6738	5257
Percent	100.0	39.6	30.9
Placed at $5.00 and over	11,538	1183	3634
Percent	100.0	10.3	31.5
Counseled	17,504	2567	3958
Percent	100.0	14.7	22.6
Tested	12,479	3771	3282
Percent	100.0	30.2	26.3
Enrolled in training	1943	909	462
Percent	100.0	46.8	23.8

An analysis of the services rendered to the teenaged applicants indicate an adequate to strong positive effort to render employment-related services to youth. Although their proportion to total applicants was approximately 16 percent, total placements were about 20 percent, permanent placements were 17.5 percent, those tested approximated 30 percent, and enrollments in training were about 47 percent. Wage ratios offered to teenagers placed centered on the under-$2.99-per-hour group, and only ten percent were placed at jobs which paid $5.00 or more per hour. This could be attributable to the fact that teenagers have sporadic attachment to the labor force and a tendency to enter, leave, and reenter the labor force periodically, and that, due to their lack of skills, education, and work experience, are usually placed in jobs which pay minimum wages.

Only about 15 percent of the teenage applicants were counseled. This can probably be attributed to their peripheral attachment to the labor force.

The high rate of almost 45 percent enrolled in training programs is significant. One important aspect of helping teenagers in the transition from school to the world of work is training programs. If the entrant to the labor market has some degree of occupational training and/or education, chances

for better wages and career opportunities are greatly enhanced. The one important measure of the success of training programs is the proportion placed and the wage rates at which the participants are placed, and, at this time, this data is not readily retrievable from the employment service reporting systems.

Services to youth 20 to 24 years old were equally encouraging during FY 1979. Approximately 29 percent of the applicants were 20 to 24 years old, and placements were at approximately 33 percent. Wage rates at the low end and high end of the scale were about the same, 31 percent of placements.

Education and occupational training and experience were probably the two major characteristics determining the wages paid to this age cohort.

Counseling, testing, and training services were not rendered to youth applicants in proportion to their representation in the Colorado Job Service Centers. It is hoped that some surveys in the future could be made to ascertain what selection criteria are used for determining who is to be counseled, tested, and enrolled in training programs. In addition, data concerning placement and wage rates of those receiving such services should be gathered so that these activities can be evaluated as to their success in serving applicants.

Nonagricultural openings received totaled 144,807 in FY 1979, a slight drop of 2.5 percent from FY 1978. Openings filled were only six percent less than those in 1978, indicating a drop in the cancellation rate.

Openings unfilled at the close of the fiscal year reflected a slight, one percent drop, and openings unfilled 30 days or more reflected an almost ten percent drop in FY 1979.

In the past, the inability to fill some job openings placed with the Job Service Centers was a result of low wages, poor working conditions, or educational and work experience requirements either beyond those of agency applicants or too stringent for the remuneration offered. Other causes have been geographic inaccesibility, commission-only wages, or provisions to supply one's own tools or own leads.

It is recommended that in FY 1980 some surveys and analyses of unfilled job openings be undertaken so that the agency may give better service to employers as well as to applicants.

Approximately 63 percent of the nonagricultural job

openings received and filled were limited to four occupational clusters: clerical, services, structural work, and packaging and materials handling.

Of these four occupational clusters, packaging and materials handling recorded the least number of unfilled openings, indicating a good supply of applicants to fill the jobs.

Services reflected the largest percentage of unfilled job openings, with structural and clerical second and third. This same phenomenon held true in FY 1978 as well.

There was a slight improvement in the proportion of openings unfilled 30 days or more in FY 1979, almost 56 percent of total unfilled job openings as opposed to 61 percent in FY 1978.

Some in-depth analysis of these unfilled job openings could lead to creative measures to reduce the length and number of unfilled openings and to the placement of more applicants. In FY 1979, approximately 25 percent of applicants available were placed, indicating that we could surely improve our services to applicants with the job openings that are remaining unfilled. We should also undertake to analyze why we have a 30 percent cancellation rate.

UNEMPLOYMENT RATE ESTIMATES
METHODOLOGY

Ratios of the youth (16-19-years-old) population were taken from the 1978 Annual Average Current Population Survey (CPS) and applied to the estimated total population for 1978 as developed by the Colorado Department of Local Affairs (Series CP-26, No. 79 (A)1) for state and counties.

Employment and unemployment data for the youth (16-19-years-old) population were developed by using the 1978 annual average employment and unemployment estimates for each county as developed by the Labor Market Information Branch.

This data should be used with caution, inasmuch as the 1978 annual average statistics are based on a probability sample of households in Colorado and are not a complete count, and therefore are subject to both sampling and nonsampling error.

Inasmuch as this information is at best an approximation, it is suggested that the youth unemployment rates be arranged in ranges for general county publication.

For example:

Under 5%
5.0 - 9.9%
10.0 - 14.9%
15.0% and over

GLOSSARY

Applicant - a person who has participated in an application-taking interview, and whose application record (if he/she is fully registered) includes personal characteristics, work history, and occupational classification.

Summer Youth applicant - a student under 22 years of age who is applying for a summer job only.

CDET - Colorado Division of Employment and Training.

CETA - Comprehensive Employment and Training Act.

Civilian labor force - the total of all civilians classified as employed or unemployed (q.v.).

Claimant - a person who files either an initial claim or a continued week claim under 1) any state or federal unemployment compensation program or 2) any other program administered by the state agency.

Eligible claimant - an individual who has been determined monetarily eligible for benefit payments under one or more state or federal unemployment compensation programs.

Economically disadvantaged - a person who is either

1. A member of a family which receives public assistance;
2. A member of a family whose income during the previous six months on an annualized basis was such that:
   (i) the family would qualify for public assistance;
   (ii) it does not exceed the poverty level; or
   (iii) it does not exceed 70 percent of the lower living standard income level.
3. A foster child on whose behalf state or local government payments are made; or
4. Encumbered with significant barriers to employment.

Employed - all people who work as paid employees, self-employed workers, and unpaid family workers, if they worked 15 hours or more in a survey week.

Nonagricultural placement - a placement in an establishment primarily engaged in activities classifiable in one of the major industry groups 08-99.

SMSA - Standard Metropolitan Statistical Area.

Teenagers - those persons aged 16 through 19 years.

Unemployed - all those who are not working but who have made specific efforts to find a job within the past four weeks, and who are available to work or are waiting to report to a new wage and salary job within 30 days.

Youth - those persons under 25 years of age.
